NETWORKING+

FEATURES LIST 2024

Welcome to the Networking+ magazine 2024 features list, which includes a detailed outline of magazine and website contributions we're seeking for the year ahead.

In a digital format, we target every type of user as they consider core LAN and WAN infrastructure, how to optimise and monitor, the security of their network and what's best for their organisation from a WAN connectivity perspective.

We've established popular columns with comment and opinion from industry experts, who contribute in-depth features to expand on a subject, technology, or strategy. At Networking+ magazine, our focus is on four key areas of public and private sector enterprise:

1. Building the network: premises infrastructure

2. Running the network: hardware

3. Maintaining the network: network intelligence

4. Scaling the network: expanding connectivity

Our readership comprises communications, network, IT and data centre managers, directors, and engineers throughout UK public and private sect

Below is what we're including in this year's issues:

ON THE NETWORK
A technology- focused piece written by a communications, network, IT, or DC 'expert'. They can examine anything affecting our industry.

VIEW FROM THE TOP
A C-level personality chooses a hot topic and gives their view. This can be based on any major issue, problem or piece of news.

WORD ON THE WEB
Pick a problem harming the industry, explain how it can be fixed. We will publish it on the website and plug it in the magazine.

CASE STUDIES
Please send through any examples that showcase your solutions in action.

IoT
Send us examples of IoT in application across different sectors and/or opinion pieces on the subject.

Top Tips
An expert's opinion on how to pick the right solution for your enterprise

Critical Communications
We are seeking opinions on critical communications networks and technologies in play in the UK

All content is utilised as per the editor's discretion and carries no charge because relevant, focused, independent and informed content is the key to a strong and active readership. However, any content that doesn't make the final cut of the magazine will be considered for our website - **networkingplus.co.uk**

We look forward to working with you again this year and hope that 2024 brings us all good fortune!
