

## FEATURES LIST 2026

Welcome to the 2026 features list for Networking+ including a detailed outline of magazine and website contributions we're seeking for the year ahead.

In a digital format, we target every type of user as they consider core fixed and wireless LAN, MAN, DC and WAN infrastructure solutions, how to optimise and monitor the network, the essential security of the network and what's best for their organisation from a WAN connectivity perspective.

We've established popular columns with comment and opinion from industry experts, who also contribute to in-depth features to expand on a subject, technology, or strategy. Our focus is on four key elements of any public and private sector enterprise network:

1. Building the network: premises infrastructure
2. Running the network: network hardware
3. Maintaining the network: network intelligence
4. Scaling the network: expanding connectivity onto a WAN

Our readership comprises communications, network, IT and data centre managers, directors, and engineers throughout UK public and private sector.

In addition to our focused news and analysis, below are the regular issue columns and comments – contact us if you'd like to get involved with any of these.

### ON THE NETWORK

A technology- focused piece written by a communications, network, IT, or DC 'expert'. They can examine anything affecting our industry.

### VIEW FROM THE TOP

A C-level personality chooses a hot topic and gives their view. This can be based on any major issue, problem or piece of news.

### WORD ON THE WEB

Pick a problem harming the industry, explain how it can be fixed. We will publish it on the website and plug it in the magazine.

### CASE STUDIES

Please send through any examples that showcase your solutions in action.

### IoT

Send us examples of IoT in application across different sectors and/or opinion pieces on the subject.

### Top Tips

An expert's opinion on how to pick the right solution for your enterprise

### Critical Communications

We are seeking opinions on critical communications networks and technologies in play in the UK

All content is utilised at the editor's discretion and carries no charge because relevant, focused, independent and informed content is the key to a strong and active readership. However, any content that doesn't make the final cut of the magazine will be considered for our website - [networkingplus.co.uk](https://networkingplus.co.uk) - and e-newsletter.

We look forward to working with you again this year and hope that 2026 brings us all good fortune!
